Abstract: We describe a framework for parallelism extraction and partitioning of code regions. This framework is an extension of M. Girkar's (1981) work on parallelism, using a Petri net model to represent parallel code, and applying it to

Keywords: Petri net model, Petri nets, acyclic code regions, explicit synchronization, functional parallelism, modified optimization techniques, multi threaded compilers, parallel code, parallel programming, parallelising compilers, parallelism extraction, parallelizing compilers, simple partitioning technique

This paper presents a set of algorithms for efficiently evaluating join queries over data tables in sensor networks. We describe and evaluate three algorithms and the advantage of distributed join techniques. Our algorithms are capable of handling large-scale sensor networks.

The process of integrating the schemas of several databases into an integrated schema is not easy, due to semantic heterogeneities. We present a method/sup class similarities by following a strategy and applying comparison criteria
